Aims and Scope

The **Journal of South American Earth Sciences** will provide an international medium for the publication of scientific work concerned with all aspects of the earth sciences in the South American continent and the surrounding oceans. Contributions will also be accepted from the adjacent regions of the Caribbean, Central America and the Antarctic Peninsula. Papers must have a regional appeal and should present work of more than local significance.

Research papers dealing with the regional geology of South American cratons and mobile belts; economic geology particularly metallogenesis and hydrocarbon genesis; stratigraphy, structure and basin evolution; geophysics and geochemistry; volcanology; tectonics and Quaternary geology will be featured. Short notes, discussions, book reviews and conference and workshop reports will also be included when relevant. A summary of new developments in already established regional projects, as well as new initiatives dealing with the geology of the continent, will be summarized and presented on a regular basis.

In order to guarantee the maximum possible diffusion of the Journal, English will be the prime language. Authors are strongly advised to submit their papers in English although a proportion of papers accepted for publication may be in Spanish. Contributors will also be encouraged to include abstracts in both English and Spanish.

The **Journal of South American Earth Sciences** is published jointly by Pergamon Press and the Earth Sciences and Resources Institute, University of South Carolina.
